## List of Tables

1	Trace between test cases and requirements . . . . .	3
2	Trace between test cases and modules . . . . .	4
3	Trace between test cases and modules . . . . .	4

This document provides a summary on the results of executing the test cases contained in the [VnV plan](#). Sections 3 and 4 summarize the results from test according to Sections 4.1 and 4.2 of the [VnV](#), respectively.

## 3 Functional Requirements Evaluation

### 3.1 Input Verification

- **Test Cases(s):** test-em-props1...6, test-inp-type-1...5, test-sys-setup-1...6
- **Requirements:** R1, R2
- **Type:** Automatic
- **Result Summary:** All cases passed
- **Logs/Re-test:** Results can be found under the [tests/logs](#) folder. To re-execute the tests, the user must run `pytest -q` in the [cas741.oemp](#) directory.

### 3.2 Output Verification

- **Test Cases(s):** test-output-correct-1..2
- **Requirements:** R6
- **Type:** Automatic
- **Result Summary:** All cases passed
- **Logs/Re-test:** Results can be found under the [tests/logs](#) folder. To re-execute the tests, the user must run `pytest -q` in the [cas741.oemp](#) directory.

### 3.3 Intermediate Value Verification

- **Test Cases(s):** test-intmed-svd-1...2
- **Requirements:** R3, R4, R5

- **Type:** Automatic
- **Result Summary:** All cases passed
- **Logs/Re-test:** Results can be found under the [tests/logs](#) folder. To re-execute the tests, the user must run `pytest -q` in the [cas741.oemp](#) directory.

## 4 Nonfunctional Requirements Evaluation

### 4.1 Accuracy

The author was not able to generate a distribution plot, but the minimum singular values generated by OEMP were far larger than those generated by greedy/random algorithms for similar problems (unpublished work).

### 4.2 Usability

The author has not yet received responses from the participants of the Usability Survey. The completion of this section will be in future drafts of the document.

### 4.3 Maintainability

The author has not yet received responses from the participants of the Usability Survey. The completion of this section will be in future drafts of the document.

### 4.4 Portability

The author was able to run and pass all tests on a Windows and Linux machine. MacOS usage will be reported in future drafts.

## 5 Unit Testing

System tests verified the correctness of the Output Results Module, which in turn verified the correctness of all other modules, except the Input Param-

ters Module, which was verified separately (also by system tests). Thus, unit tests were deemed unnecessary.

## 6 Changes Due to Testing

The main changes that were motivated by testing were the establishment of the Generate Poses and Magnetic Moment modules as separate ones, after they were previously local functions of other modules. Another major change was the transition from console input to a config file for entering problem related parameters.

## 7 Automated Testing

OEMP uses PyTest for all testing purposes. Test cases can be found in Python files under the [tests](#) folder. Running `pytest -q` in the [cas741\\_oemp](#) directory will execute all tests.

## 8 Trace to Requirements

	R1	R2	R3	R4	R5	R6	NFR1	NFR2	NFR3	NFR4
test-em-props-1...6	X	X								
test-inp-type-1...5	X	X								
test-sys-setup-1...6	X	X								
test-output-correct-1...2						X				
test-intmed-svd-1...2			X	X	X		X			

Table 1: Trace between test cases and requirements

## 9 Trace to Modules

	ConstantParams	InputParams	MagMoment	MagField	MagForce	GenPoses	ActMatrix	FindOpt	Output	Main
test-em-props-1...6		X								
test-inp-type-1...5		X								
test-sys-setup-1...6		X								
test-output-correct-1...2	X		X	X	X	X	X	X	X	X
test-intmed-svd-1...2			X	X	X	X	X	X	X	X

Table 2: Trace between test cases and modules

## 10 Code Coverage Metrics

	Statements	Cover %
ConstantParams	2	100%
InputParams	85	100%
MagMoment	2	100%
MagField	10	100%
MagForce	14	100%
GenPoses	9	100%
ActMatrix	10	100%
FindOpt	32	100%
Output	11	100%
Main	19	100%
Total	194	100%
